## High Visibility Safety Gloves

**Gloves Engineered to be noticed in busy high traffic environments**

Maxfit® High visibility gloves use Yellow "Cautionary" colors to be seen in dangerous high traffic work areas.

The latest Patented Grip Technology Provides outstanding better grip - less slippage & a safer work place.

When the environment changes to damp or rain grip is maintained - more power, less fatigue.

The contour stretch fit with highly breathable coating provides the hand with all day comfort and dexterity.

High  
Visibility

Maxfit® High Visibility Safety Gloves are made with bright Yellow and Orange colors that can be seen easily even in dull lighting. Color conveys specific meanings and the choice of Yellow/Orange conforms to the OSHA standardized color coding that indicates "CAUTION"/"WARNING". Maxfit® High Visibility Safety Gloves are designed with people's perception in mind - People judge objects colored Yellow and Orange as being larger and consequently they appear as if closer. These gloves invoke a CAUTIONARY/WARNING call to action and induce safer behaviour.

Nor Nitrile in the  
Palm Coatings**

comfort

The innovative materials, design, contouring fit and light weight construction of the Maxfit® High Visibility Safety Gloves provide outstanding comfort and fit. Maxfit® High Visibility Gloves provide outstanding breathability and the fibers draw away perspiration so your hands do not sweat even during heavy work. The gloves are non fatiguing, soft and flexible to wear. Maxfit® gloves provide all day comfort.

dexterity

Most other work gloves are bulky, feel uncomfortable and lack dexterity. Maxfit® Gloves are the Leader in Dexterity and allow precise movement and control.

grip

Our patented grip technology ensures Maxfit® High Visibility Safety Gloves provide performance grip in all conditions. Grip is improved by 40% versus the bare hand and by an incredible 410% in wet/oily conditions.
